Application/Control Number: 10/705,503

Art Unit: 1711

Claims 4, 5 and 7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 4 and 5 are confusing because it isn't understood why the functionality is expressed in mg KOH/g?

Claim 7 is confusing because the hydroxyl group content of the blocking agent is based on the weight of the prepolymer, which doesn't have any hydroxyl groups.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schmalstieg (6,060,574) in view of the ARCO Product Bulletin.

Schmalstieg discloses a prepolymer of polyisocyanate and suitable polyether polyols (col. 3, lines 30-36), and blocked with a hydrocarbon resin having phenolic OH groups having 1-6 wt. % hydroxyl group content (col. 4, lines 10-30). He discloses curing with polyamines having at least two primary amine groups (col. 4, lines 31-40), and optionally includes an epoxy compound in this reaction mixture (see claim 1). He uses the resulting polymer for coatings (col. 6, line17), and in the examples, he shows solvent free compositions. He differs from the claims by not specifically disclosing making the prepolymer from polyether polyols having a narrow polydispersity and a low content of terminal unsaturated groups (Acclaim polyols).

Art Unit: 1711

The Arco product bulletin of Acclaim polyols discloses, on page 5 (Lower Monol Levels Improve Physical Properties) that prepolymers made with these polyols are lower in viscosity and that resulting polyurethanes have improved tensile strength, elongation and tear strength.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Acclaim polyols in the prepolymer of Schmalstieg in order to obtain better physical properties for his coatings.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel F. Gorr whose telephone number is 571-272-1072. The examiner can normally be reached on Mon., Tues., Thurs., Fri., from 7:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck can be reached on 571-272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
